## DETAILED ACTION

### *Election/Restrictions*

The arguments filed November 2nd, 2007 in response to the restriction requirement mailed October 5th, 2007 have been considered and are persuasive. **Claims 1-47 have been rejoined, examined and indicated as allowable, as outlined below.**

### *Allowable Subject Matter*

Claims 1-47 allowed.

The following is an examiner's statement of reasons for allowance:

As to claim 1, the prior art of record, taken alone or in combination, fails to disclose or render obvious an optical signal analyzer including: a first coupler for mixing an optical reference signal and an input optical signal to be determined and generating *multiple* mixed signals; and a data processor for determining the input optical signal in the *time domain* from the *multiple* detected power signals, in combination with the rest of the limitations of claim 1.

As to claim 16, the prior art of record taken alone or in combination, fails to disclose or render obvious a method for analyzing an unknown optical signal including: mixing an optical reference signal and an input optical signal to be analyzed to generated *multiple* mixed signals; and determining the input optical signal in the *time domain* from the *multiple* detected power signals, in combination with the rest of the limitations of claim 16.

As to claim 25, the prior art of record, taken alone or in combination, fails to disclose or render obvious a method for analyzing an optical signal including: mixing the first reference portion and the first input optical signal portion and generating first, second, and third mixed signals; mixing the second reference portion and the second input optical signal portion and

generating fourth, fifth, and sixth mixed signals; determining the input optical signal using the first through sixth detected power signals, in combination with the rest of the limitations of claim 25.

As to claim 33, the prior art of record, taken alone or in combination, fails to disclose or render obvious a method of calibrating a first detector block for detecting first, second and third power signals from a first coupler including: generating a calibration matrix for the first detector block using determined phase and amplitude corrections, in combination with the rest of the limitations of claim 33.

As to claim 40, the prior art of record, taken alone or in combination, fails to disclose or render obvious a method of calibrating a first detector block for detecting first, second and third power signals output from a first coupler, a second detector block for detecting fourth, fifth and sixth power signals output from a second coupler including: generating a vector calibration matrix using the complex vectors generated for each of the reference signal polarizations in combination with the rest of the limitations of claim 40.

As to claim 46, the prior art of record, taken alone or in combination, fails to disclose or render obvious a method for reconstructing an optical signal including for sue in a system including a first detector block for detecting first, second and third power signals output from a first coupler, a second detector block for detecting fourth, fifth and sixth power signals output from a second coupler including: using the impulse response to create a Green's function that relates the input optical signal as a function of time and a measured signal determined from the detected powers as a function of time, in combination with the rest of the limitations of claim 46.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrick J. Connolly whose telephone number is 571.272.2412. The examiner can normally be reached on 9:00 am - 7:00 pm Monday-Thursday.
